Publication of record for individual papers is online in the SPIE Digital Library.

SPIEDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

• The first four digits correspond to the SPIE volume number.
• The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

### SESSION 1  NOVEL IMAGING TECHNIQUES AND APPLICATIONS

9417 02 Developing hyperpolarized silicon particles for advanced biomedical imaging applications [9417-1]

9417 03 Development of a diaphragmatic motion-based elastography framework for assessment of liver stiffness [9417-2]

9417 04 Voxel-level reproducibility assessment of modality independent elastography in a pre-clinical murine model [9417-3]

9417 06 A hand-held EPR scanner for transcutaneous oximetry [9417-5]

### SESSION 2  INNOVATIONS IN IMAGE PROCESSING

9417 07 Multi-atlas segmentation for abdominal organs with Gaussian mixture models [9417-6]

9417 08 Quantification of esophageal wall thickness in CT using atlas-based segmentation technique [9417-7]

9417 09 Fully automatic algorithm for segmenting full human diaphragm in non-contrast CT Images [9417-8]

9417 0A Progress toward automatic classification of human brown adipose tissue using biomedical imaging [9417-9]

### SESSION 3  NOVEL MR TECHNIQUES AND APPLICATIONS

9417 0B A Bloch-McConnell simulator with pharmacokinetic modeling to explore accuracy and reproducibility in the measurement of hyperpolarized pyruvate [9417-10]

9417 0C Fat-water MRI is sensitive to local adipose tissue inflammatory changes in a diet-induced obesity mouse model at 15T [9417-11]

Texture analysis of automatic graph cuts segmentations for detection of lung cancer recurrence after stereotactic radiotherapy [9417-44]

Fourier-based linear systems description of free-breathing pulmonary magnetic resonance imaging [9417-45]

SESSION 10 BONE

Validation of CBCT for the computation of textural biomarkers [9417-46]
Validation of TMJ osteoarthritis synthetic defect database via non-rigid registration [9417-47]
Micro-computed tomography (CT) based assessment of dental regenerative therapy in the canine mandible model [9417-48]
Characterizing trabecular bone structure for assessing vertebral fracture risk on volumetric quantitative computed tomography [9417-49]
Volumetric characterization of human patellar cartilage matrix on phase contrast x-ray computed tomography [9417-50]
Real time early detection imaging system of failed wounds and heterotopic ossification using unique Raman signatures [9417-51]

POSTER SESSION

Simplified correction of $B_1$ inhomogeneity for chemical exchange saturation transfer (CEST) MRI measurement with surface transceiver coil [9417-52]
Imaging tooth enamel using zero echo time (ZTE) magnetic resonance imaging [9417-53]
Rapid MR spectroscopic imaging of lactate using compressed sensing [9417-54]
A Laplacian-based SNR measure: shear stiffness estimation in MR elastography [9417-55]
Interaction of multiple networks modulated by the working memory training based on real-time fMRI [9417-56]
Functional connectivity analysis in resting state fMRI with echo-state networks and non-metric clustering for network structure recovery [9417-57]
Investigating the use of mutual information and non-metric clustering for functional connectivity analysis on resting-state functional MRI [9417-58]
Decoding the subjective rotation direction of the spinning dancer from fMRI data [9417-59]
Structural development of human brain white matter from mid-fetal to perinatal stage [9417-60]
A non-linear regression method for CT brain perfusion analysis

Early postnatal myelin content estimate of white matter via T1w/T2w ratio

Subcortical shape and volume abnormalities in an elderly HIV+ cohort

Integrating histology and MRI in the first digital brain of common squirrel monkey, Saimiri sciureus

A novel approach to motion correction for ASL images based on brain contours

Resting fMRI measures are associated with cognitive deficits in schizophrenia assessed by the MATRICS consensus cognitive battery

Fiber based in-vivo imaging of epithelial FAD fluorescence: experiments and simulations

Digital speckle pattern interferometry based anomaly detection in breast mimicking phantoms: a pilot study

Fourier transform infrared (FT-IR) spectroscopy and imaging of the nucleus to characterize DNA contributions in different phases of the cell cycle

Semi-automated 2D Bruch's membrane shape analysis in papilledema using spectral-domain optical coherence tomography

Development of color micro optical-CT: evaluation using phantom and biological samples

Coherent noise remover for optical projection tomography

Signal enhancement in optical projection tomography via virtual high dynamic range imaging of single exposure

Towards myocardial contraction force image reconstruction for heart disease assessment and intervention planning

Treatment planning for image-guided neuro-vascular interventions using patient-specific 3D printed phantoms (Cum Laude Poster Award)

Aneurysm flow characteristics in realistic carotid artery aneurysm models induced by proximal virtual stenotic plaques: a computational hemodynamics study

A reconstruction method of intra-ventricular blood flow using color flow ultrasound: a simulation study

Consistent and reproducible positioning in longitudinal imaging for phenotyping genetically modified swine

Mid-callosal plane determination using preferred directions from diffusion tensor images
Feature transformation of neural activity with sparse and low-rank decomposition

Toward content-based image retrieval with deep convolutional neural networks

Effects of frame rate and image resolution on pulse rate measured using multiple camera imaging photoplethysmography

Tooth segmentation system with intelligent editing for cephalometric analysis

Non-invasive pulmonary blood flow analysis and blood pressure mapping derived from 4D flow MRI

Effect of sample size on multi-parametric prediction of tissue outcome in acute ischemic stroke using a random forest classifier

Automated pipeline to analyze non-contact infrared images of the paraventricular nucleus specific leptin receptor knock-out mouse model

MR image analytics to characterize upper airway architecture in children with OSAS

A new application of electrical impedance spectroscopy for measuring glucose metabolism: a phantom study

Investigating the geometry of pig airways using computed tomography

Three-dimensional segmentation of pulmonary artery volume from thoracic computed tomography imaging

Microstructure analysis of the pulmonary acinus using a synchrotron radiation CT

Building a bone µ-CT images atlas for micro-architecture recognition

Bone vascularization and bone micro-architecture characterizations according to the µCT resolution

Endoscopic Cerenkov luminescence imaging: in vivo small animal tumor model validation

Size-based emphysema cluster analysis on low attenuation area in 3D volumetric CT: comparison with pulmonary functional test
Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The Biomedical Applications in Molecular, Structural, and Functional Imaging conference held at Renaissance Orlando at SeaWorld in Orlando, Florida was a tremendous success. There was a tremendous boost in the number of abstracts submitted and conference attendees over previous years. Chairs Barjor Gimi and Robert Molthen welcomed Daniel Sodickson from New York University, who delivered a visionary and inspiring talk on the renaissance in rapid imaging. The talk highlighted developments in hardware, image acquisition, and reconstruction that spanned multiple modalities and convincingly presented why the medical imaging field was poised for a quantum leap in the area of rapid imaging.

The diverse sessions included Novel Imaging Techniques and Applications; Innovations in Image Processing; Novel MR Techniques and Applications; Neurological Imaging; fMRI; Optical; Fluids and Cardiovascular; Cancer Imaging; Lung; and Bone, along with pleasant lunches and productive coffee breaks. The poster session was lively with numerous posters presenting very high-quality work. The judges selected Treatment planning for image-guided neuro-vascular interventions using patient-specific 3D printed phantoms by Megan K. Russ from The University at Buffalo for the poster prize, with honorable mentions for Simplified correction of $B_1$ inhomogeneity for chemical exchange saturation transfer (CEST) MRI measurement with surface transceiver coil by Phillip Zhe Sun of Massachusetts General Hospital, Investigating the use of mutual information and non-metric clustering for functional connectivity analysis on resting-state functional MRI by XiXi Wang of University of Rochester Medical Center, and Automated pipeline to analyze non-contact infrared images of the paraventricular nucleus specific leptin receptor knock-out mouse model by Myriam Diaz Martinez of Vanderbilt University Medical Center.

2015 Medical Imaging Award Recipients

Robert F. Wagner Best Student Paper Award
Robert F. Wagner was an active scientist in the SPIE Medical Imaging meeting, starting with the first meeting in 1972 and continuing throughout his career. He ensured that the BRH, and subsequently the CDRH, was a sponsor for the early and subsequent Medical Imaging meetings, helping to launch and ensure the historical success of the meeting. The Robert F. Wagner All-Conference Best Student Paper Award (established 2014) is acknowledgment of his many important contributions to the Medical Imaging meeting and his many important advances to the field of medical imaging.

This award is cosponsored by:

The Medical Image Perception Society

2015 Recipients:

First Place: **Automatic discrimination of color retinal images using the bag of words approach** (9414-54)
I. Sadek, D. Sidibé, F. Meriaudeau, Univ. of Burgundy (France)

Second Place: **Automated pulmonary lobar ventilation measurements using volume-matched thoracic CT and MRI** (9417-42)
F. Guo, S. Svenningsen, E. Bluemke, M. Rajchl, J. Yuan, A. Fenster, G. Parraga, The Univ. of Western Ontario (Canada)

Conference Awards

2015 Recipients:

Cum Laude Poster Award: **Treatment planning for image-guided neuro-vascular interventions using patient-specific 3D printed phantoms** (9417-79)
Megan K. Russ, Ryan P. O’Hara, Swetadri Vasan Setlur Nagesh, Maxim Mokin, Carlos Jimenez, Adnan H. Siddiqui, Daniel R. Bednarek, Stephen Rudin, Ciprian N. Ionita, Univ. at Buffalo (United States)
