Volume 11672

Proceedings of SPIE 0277-786X, V. 11672

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Laser Resonators, Microresonators, and Beam Control XXIII, edited by Vladimir S. Ilchenko, Andrea M. Armani,
Julia V. Sheldakova, Alexis V. Kudryashov, Alan H. Paxton, Proc. of SPIE Vol. 11672, 1167201
© 2021 SPIE · CCC code: 0277-786X/21/\$21 · doi: 10.1117/12.2596694

Proc. of SPIE Vol. 11672 1167201-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Laser Resonators, Microresonators, and Beam Control XXIII*, edited by Vladimir S. Ilchenko, Andrea M. Armani, Julia V. Sheldakova, Alexis V. Kudryashov, Alan H. Paxton, Proc. of SPIE 11672, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

OPTICAL FREQUENCY COMBS I

- 11672 05 **Inverse spectral design of Kerr microcomb pulses** [11672-2]
- 11672 06 **Frequency comb generation in silicon nitride resonators with amplitude modulated pump** [11672-3]
- 11672 07 **Applications of ultra-silicon-rich nitride devices for nonlinear integrated photonics (Invited Paper)** [11672-4]

OPTICAL FREQUENCY COMBS II

- 11672 09 **Fabrication of dispersion engineered ultrahigh-Q crystalline optical microresonator for broad-bandwidth optical parametric oscillation (Invited Paper)** [11672-6]
- 11672 0A **On parametric generation of deep UV light in monolithic cavities with cubic nonlinearity** [11672-7]
- 11672 0C **In search of time crystalline behavior in Kerr optical frequency combs (Invited Paper)** [11672-9]

OPTICAL FREQUENCY COMBS III

- 11672 0G **Optimization of the self-injection locking and resonator characterisation in this regime** [11672-13]

NOVEL TOPOLOGIES AND DEVICES

- 11672 0K **Anti-Stokes and cascaded Stokes Raman microlaser from an organically modified optical resonator** [11672-17]
- 11672 0N **Dynamical analysis of miniature optoelectronic oscillators based on whispering-gallery mode modulators with quadratic nonlinearity (Invited Paper)** [11672-20]

MICRORESONATOR SENSORS

- 11672 0O **Micro-optical-electro-mechanical systems (MOEMS) sensors based on cavity optomechanics (Invited Paper)** [11672-21]

- 11672 OQ **Microresonator sensors based on evanescent field perturbation** [11672-25]
- 11672 OR **Progress on optical microspheres for CO₂ sensors** [11672-27]
- 11672 OS **Optical micro-resonator sensor for air velocity measurement** [11672-29]
- 11672 OT **Stimulated chiral light-matter interactions in biological microlasers** [11672-40]

BEAM SHAPING I

- 11672 OU **Fibre-delivered kilowatt petal beams with self-healing properties** [11672-22]
- 11672 OV **240-mm bimorph deformable mirror for wavefront correction at the PEARL facility (Invited Paper)** [11672-24]
- 11672 OW **Focusing laser beam through pinhole using high-resolution stacked-actuator deformable mirror** [11672-26]

BEAM SHAPING II

- 11672 IO **Application-based m-square measurement techniques for industrial lasers** [11672-32]
- 11672 II **Revised theory for the linewidth of diode lasers under external optical feedback** [11672-33]

POSTER SESSION

- 11672 I2 **Non-paraxial diffractive optical elements for beam-splitting with ultra-high uniformity** [11672-34]
- 11672 I3 **Frequency comb generation in whispering gallery mode silica microsphere resonators** [11672-35]
- 11672 I4 **Bimorph vs stacked actuator deformable mirror for laser beam focusing through a moderately scattering medium** [11672-36]
- 11672 I5 **Small-aperture stacked-array deformable mirror made of the piezoceramic combs** [11672-37]
- 11672 I6 **Computer modelling of WGM microresonators with a zinc oxide nanolayer using COMSOL multiphysics software** [11672-38]
- 11672 I7 **Mode family analysis for PMMA WGM micro resonators using spot intensity changes** [11672-39]
