

PROCEEDINGS OF SPIE

Mobile Multimedia/Image Processing, Security, and Applications 2012

**Sos S. Agaian
Sabah A. Jassim
Eliza Yingzi Du**
Editors

**23–24 April 2012
Baltimore, Maryland, United States**

Sponsored and Published by
SPIE

Volume 8406

Proceedings of SPIE, 0277-786X, v. 8406

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Mobile Multimedia/Image Processing, Security, and Applications 2012, edited by
Sos S. Agaian, Sabah A. Jassim, Eliza Yingzi Du, Proc. of SPIE Vol. 8406, 840601
© 2012 SPIE · CCC code: 0277-786X/12/\$18 · doi: 10.1117/12.977660

Proc. of SPIE Vol. 8406 840601-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 BIOMETRICS I

- 8406 02 **Local fingerprint image reconstruction based on gabor filtering** [8406-02]
S. Bakhtiari, S. S. Agaian, M. Jamshidi, The Univ. of Texas at San Antonio (United States)
- 8406 03 **Parallel computing-based sclera recognition for human identification** [8406-03]
Y. Lin, Indiana Univ.-Purdue Univ. (United States) and Xidian Univ. (China) and Ningxia Normal Univ. (China); E. Y. Du, Z. Zhou, Indiana Univ.-Purdue Univ. (United States)

SESSION 2 MOBILE APPLICATIONS

- 8406 05 **dLocAuth: a dynamic multifactor authentication scheme for mCommerce applications using independent location-based obfuscation** [8406-05]
T. Kuseler, I. A. Lami, The Univ. of Buckingham (United Kingdom)
- 8406 06 **Comprehensive feature and texture fusion-based image registration approach** [8406-06]
F. Bowen, E. Y. Du, Indiana Univ.-Purdue Univ. (United States); J. Hu, Purdue Univ. (United States)
- 8406 07 **Human visual system-based smoking event detection** [8406-07]
A. D. Odetallah, S. S. Agaian, The Univ. of Texas at San Antonio (United States)
- 8406 08 **Information encryption and retrieval in mid-RF range using acousto-optic chaos** [8406-08]
M. R. Chatterjee, A. Kundur, Univ. of Dayton (United States)

SESSION 3 BIOMETRICS II

- 8406 09 **Biometric templates selection and update using quality measures** [8406-09]
A. J. Abboud, S. A. Jassim, The Univ. of Buckingham (United Kingdom)
- 8406 0B **Adaptive error correction codes for face identification** [8406-11]
W. R. Hussein, H. Sellahewa, S. A. Jassim, The Univ. of Buckingham (United Kingdom)
- 8406 0C **Face identification with frequency domain matched filtering in mobile environments** [8406-12]
D.-S. Lee, Y.-H. Woo, S. Yeom, S.-H. Kim, Daegu Univ. (Korea, Republic of)

SESSION 4 MULTIMEDIA SIGNAL PROCESSING ALGORITHMS AND SYSTEMS

- 8406 OD **Arabic handwritten: pre-processing and segmentation** [8406-13]
M. Maliki, S. Jassim, N. Al-Jawad, H. Sellahewa, The Univ. of Buckingham (United Kingdom)
- 8406 OE **Saccadic eyes recognition using 3-D shape data from a 3-D near infrared sensor** [8406-14]
S. Guo, Alcorn State Univ. (United States); J. Tang, Michigan Technological Univ. (United States); J. B. Parakkat, K. M. Robinette, Air Force Research Lab. (United States)
- 8406 OF **Mathematical properties of a sensitivity measure for quantifying feature variation** [8406-15]
S. DelMarco, BAE Systems (United States)
- 8406 OG **Salient region detection for object tracking** [8406-16]
F. Chan, M. Jiang, Wuhan Univ. of Science and Technology (China); J. Tang, Wuhan Univ. of Science and Technology (China) and Michigan Technological Univ. (United States)
- 8406 OH **New methods for high-capacity embedding in multimedia covers using redundant number systems with adjunctive numerical representations** [8406-17]
S. S. Agaian, J. C. Collins, Univ. of Texas at San Antonio (United States)

SESSION 5 IMAGE/INFORMATION SECURITY

- 8406 OI **Privacy-aware access control for video data in intelligent surveillance systems** [8406-18]
H. Vagts, Fraunhofer-Institut für Optronik, Systemtechnik und Bildauswertung (Germany) and Karlsruhe Institute of Technology (Germany); A. Jakoby, Karlsruhe Institute of Technology (Germany)
- 8406 OJ **A multi-scale non-local means algorithm for image de-noising** [8406-19]
S. Nercessian, K. A. Panetta, Tufts Univ. (United States); S. S. Agaian, The Univ. of Texas at San Antonio (United States)
- 8406 OK **Incremental fusion of partial biometric information** [8406-20]
A. J. Abboud, S. A. Jassim, The Univ. of Buckingham (United Kingdom)
- 8406 OL **Retinal image analysis for quantification of ocular disease** [8406-21]
M. Acharyya, Advenio TecnoSys (India); S. Chakravarty, New York Institute of Technology (China); R. Raman, Choitram Netralaya (India)
- 8406 ON **Improving energy efficiency in handheld biometric applications** [8406-23]
D. C. Hoyle, J. W. Gale, R. C. Schultz, R. N. Rakvic, R. W. Ives, U.S. Naval Academy (United States)
- 8406 OO **Local enhancement and denoising algorithms on arbitrary mesh surfaces** [8406-24]
S. S. Agaian, R. Sartor, Interdisciplinary Solutions (United States)

POSTER SESSION

- 8406 OP **Penetration tests in next generation networks** [8406-25]
F. Rezac, M. Voznak, VSB-TU Ostrava (Czech Republic)

- 8406 OR **iPhone examination with modern forensic software tools** [8406-27]
T. Höne, K. Kröger, S. Luttenberger, R. Creutzburg, Fachhochschule Brandenburg (Germany)
- 8406 OS **A manifold learning based identification of latent variations in root cross sections of plants** [8406-28]
S. Chakravarty, New York Institute of Technology (China); M. Banerjee, Georgia Gwinnett College (United States)
- 8406 OT **Forensic determination of burner serial number placed on DVD-R(W) optical disks** [8406-29]
F. Irmier, K. Kröger, R. Creutzburg, Fachhochschule Brandenburg (Germany)
- 8406 OU **Computer-assisted machine-to-human protocols for authentication of a RAM-based embedded system** [8406-30]
A. Idrissa, A. Aubert, T. Fournel, Lab. Hubert Curien, CNRS, Univ. de Saint-Etienne (France) and Univ. de Lyon (France)
- 8406 OW **Conception of a course for professional training and education in the field of computer and mobile forensics** [8406-32]
K. Kröger, R. Creutzburg, Fachhochschule Brandenburg (Germany)
- 8406 OY **Arabic writer identification based on diacritic's features** [8406-34]
M. Maliki, N. Al-Jawad, S. A. Jassim, The Univ. of Buckingham (United Kingdom)
- 8406 OZ **Switching system for image enhancement and analysis of fused thermal and RGBD data** [8406-35]
S. S. Agaian, V. Sridharan, M. Blanton, Jr. The Univ. of Texas at San Antonio (United States)

Introduction

Current generations of programmable mobile devices are endowed with low-cost high-resolution digital cameras and can provide new opportunity for mass deployment in applications that involve the use of imaging. The range of such applications is widening fast to include a variety of commercial, civil, military, and industrial use. Video streaming over mobile devices, the growing use of PDA's in m-health, the transmission of image-based biometrics over mobile networks in conflict zones, and deployment of secure mobile communications in disaster areas are all but a few examples. Recent trends within the wireless communications industry indicate the emergence of dual use defense and security schemes that have civilian as well as military applications. The constrained capabilities of mobile devices and the nature of wireless channels are a source of tough challenges in image processing and security of multimedia objects. These challenges include: efficient processing of image/video processing suitable for mobile devices, security mechanism for complex multi-media signals that preserve privacy to fully exploit the capabilities of, proactive security solutions to protect computing infrastructures and sensitive information systems while preserving the privacy of the citizens.

Once again, this conference attracted numerous high quality research papers and posters all attempting to make valuable contributions towards meeting some of the challenges listed above, as well as advancing basic research in the field of mobile multimedia.

Several papers propose novel secure and efficient algorithms for image/video processing, authentication, and object/pattern recognition relating to a variety of applications. In this respect, dynamic multifactor authentication scheme for m-Commerce applications using independent location-based obfuscation method was proposed to improve the authentication efficiency and security; comprehensive feature and texture fusion-based image registration approach was proposed to improve the registration accuracy and efficiency for mobile applications; novel preprocessing and segmentation of Arabic handwritten text were developed for improved recognition; 3D shape data from a 3D near infrared sensor was used for saccadic eyes recognition; novel salient region detection method was proposed for object tracking; new retinal image analysis method was designed for quantification of progression of ocular disease; mathematical properties of a sensitivity measure was studied for quantifying feature variation; A manifold learning-based identification was designed for latent variations in root cross sections of plants; computer-assisted machine-to-human protocols were designed for authentication of a RAM-based embedded system; and enhancement and analysis fused thermal and RGBD data was proposed. Image de-noising was addressed by a fractal-based nonlocal mean

scheme while local enhancement and de-noising algorithms on arbitrary mesh surfaces for 3D images were also reported.

The security and performance of single and multimodal biometrics are covered by a number of papers with focus on improved accuracy, efficiency, and usability. Various aspects of face, fingerprint, iris, sclera, palmprint, and multimodal-based identification schemes are tackled with emphasis on the effect of image quality on template representation and performance, and the use of multifactor authentication schemes that incorporate challenge and response and/or location information. In this aspect, neuro-fuzzy prediction method was designed for corrupted fingerprint restoration; Parallel computing-based sclera recognition was proposed for human identification; SURF characterized limited physiological information was developed for face recognition; quality measures were used for Biometric templates selection and update; multi-biometrics fusion was developed for identity verification; adaptive error correction codes were proposed for face identification; real-time face identification method was designed for mobile environments; incremental fusion of partial biometric information was designed to for partial-face recognition; and new method for improving energy efficiency in handheld biometric applications was proposed.

Several papers proposed efficient encryption, forensic, stenography, and privacy-protection methods for mobile applications. In this respect, acousto-optic chaos method was proposed for information encryption and retrieval in mid-RF range; new methods were designed for high-capacity embedding in multimedia covers using redundant number systems with adjunctive numerical representations; novel approach for privacy-aware access control for video data in intelligent surveillance systems; different analysis methods for forensic investigation of mobile devices using commercial tools was studied; analysis methods were designed for Mac OS X with commercial forensic software; modern forensic software tools were used for iPhone examination; joint context prediction was used for covert data merging; and forensics of geodata was collected by various mobile devices; burner serial number placed on DVD-R(W) optical disks was studied for forensic determination;

The various presentations attracted interesting, high-quality interactions and generated only a few follow up challenges thereby demonstrating the importance and relevance of the tackled issues to the current challenges in mobile multimedia processing and security of wireless technologies. An interesting feature of this conference was the active participation of researchers from all over the world including Europe, Asia, and the US. This feature helps fostering genuine international research collaboration.
